AB Drug formulations having reduced abuse potential which contain one or more of (1) a bittering agent, (2) a bright deterrent/indicator dye and (3) fine insoluble particulate matter. The bittering agent and dye are in a form which does not affect proper administration of the drug, but the bittering agent creates a bitter side effect when the dosage form is crushed or chemically extracted and nasally, orally, buccally or sublingually administered and the dye produces a bright color when crushed and contacted. The fine insoluble particulate matter hinders extraction of the drug from the dosage form and, when crushed, can deter intravenous injection because of the presence of the insoluble particles or hinder injection by blocking an intravenous needle. The bright color of the dye, when extracted, also has a psychologically deterrent effect on intravenous abusers.

ABEN

The present invention provides a pharmaceutical composition and dosage
 form containing in combination a COX-II inhibitor and a muscle relaxant. The
 pharmaceutical composition is useful for the treatment of pain and pain
 related disorders and symptoms. The combination provides an improved
 therapeutic response as compared to either drug alone. The pharmaceutical
 composition can be included in any dosage form.
